## Serenity Gel Overview

### 2" CoolRest® Adaptive Cover

- **CoolRest® Adaptive** material actively adapts to each sleeper for individualized temperature regulation
- **CoolRest® Adaptive** technology utilizes a phase changing material to absorb heat from the sleeper and release it back as needed
- The phase changing material in this cover eliminates sweating before it starts by cooling you off when you're hot and warming you up when you're cold
- Based on technology originally developed for use in astronaut space suits

### 3" CoolRest® Gel Infused Memory Foam

- Advanced Gel infused memory foam helps you sleep cooler and provides improved pressure relief
- Perfectly conforms to your body for a soft, yet supportive feel.
- Distributes and neutralizes pressure points to provide comfort and reduce tossing and turning at night for deeper, more restful sleep.
- Open cell structure increases air flow, making it breathable and cooler to sleep on.
- Reduces motion transfer, allowing you to move without waking your partner.

Rebounds (takes its shape) quicker than older types of memory foam, making it easier to change positions.

### 8" High Resiliency Support Foam

- Designed to support and correctly align your spine so you can relax at night and wake up pain free.
- Created to work in tandem with our **CoolRest®** memory foam and provide perfect support for consistent and long lasting comfort.
- More durable than conventional foams used by other companies.
- Accommodates any sleep position- back, side, and stomach.
- The Serenity GEL with **CoolRest® Adaptive** Technology measures approximately 13 inches tall.

The **Serenity GEL with CoolRest® Adaptive Technology** uses two different types of **CoolRest® Adaptive** material in combination with our cooler sleeping **CoolRest® Gel** memory foam to make a mattress that sleeps more comfortably than you can imagine. **CoolRest® Adaptive** material uses phase changing material made with microscopic capsules coated or embedded in the cover to effectively balance temperature between the sleeper and the mattress. This cover can absorb excess heat when you are too warm, which helps reduce sweating, and release it back when you are cold to keep you from shivering. Using this dynamic temperature balancing, the **CoolRest® Adaptive** cover can help you sleep more comfortably in warm summers or cold winters.

This mattress has a plush/medium feel allowing you to softly float on the surface, yet still feel supported and comfortable.

Our mattresses feature the most technologically advanced pressure-relieving memory foam in the world. Created from years of testing and studies by the world's leading chemical company, BASF. They are made in North Carolina, packaged in Tennessee and are proudly offered at the lowest price possible.
